

# Transforming Inspection Technologies with Mentor EM

More experience in every inspection

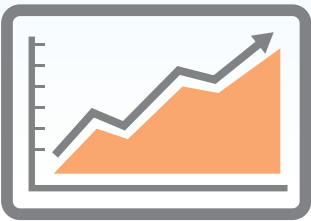

## Yesterday's Inspection

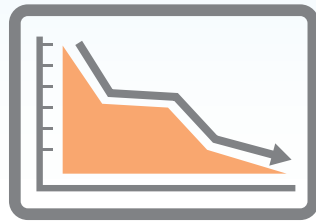

Inspections used to be less efficient, require cumbersome manuals and involve multiple levels of inspectors to collect and draw conclusions from data. There had to be a better way.

## A Changing Inspection Landscape

Increasing compliance regulations

Decreasing NDT expert workforce

With many experts retiring there is a knowledge gap developing, at the same time customers are requiring more consistent and accurate inspections.

## Today's Inspection with Mentor EM

Now, with Mentor EM, inspectors in the field can instantly access up-to-date procedures, generate reports and remotely collaborate with offsite experts. This allows for more efficient inspections and improves the probability of detection.
